# The SEE II Air Foil

The SEE II Air Foil is a surface mounted unit installed at the top rear of the bus. Consisting of an outer foil and an inner foil, the functional design is to collect oncoming air, change the direction and increase the speed while shooting it down vertically against the rear of the vehicle. Keep debris of the air and weather from collecting or adhering to the rear end.

The most common complaint from bus drivers is the poor visibility/safety problem, a complaint that we're sure you are familiar with. Motorists often experience confusion while approaching the rear of a bus. Snow packed or dirt coated lights are usually the cause. The SEE II Air Foil is very effective in preventing this hazardous situation. It is certain that many rear end collisions will be avoided with your use of the SEE II Air Foil.

## Our Tests Show:

### GREATER VISIBILITY

The SEE II Air Foil is effective in keeping the rear windows and lights clearer, longer. Travel thousands of miles instead of hundreds between cleanings.

### IMPROVED SAFETY

With cleaner, clearer windows and lights, reflective surfaces and I.D. lettering, all see warning and danger sooner and can react quicker.

### LESS MAINTENANCE

Saves many hours per year in accumulated cleaning times (which is problematic when temperatures are below freezing).

### BETTER MILEAGE

The SEE II Air Foil disrupts the vacuum draft created on the rear end as the bus parts the air. This results in improved fuel economy.

Resulting Clarity with the See II Foil

Common Winter Problem

Common Dirt Road Problem

Comparison Under Road Dust Conditions – Cleaning Demands Significantly Eased

“New 5’ wide Aerodynamic Design”

**SAFETY ENHANCEMENT IS SIGNIFICANT**  
Most bus accidents involve rear end collisions due to poor visibility because of accumulated dirt and/or snowpack. Fewer accidents will occur with the See II.

### AIR FOIL FEATURES

- Solid Aluminum
- 5’ Wide
- Powder Coat Paint – Yellow or Black
- Half Hour Installation Time (Approximate)
